January 29, 2007

TO: Dr. Lance Garrison,
Protected Resources Branch

FROM: Larry Beerkircher,
POP Observer Coordinator

SUBJECT: Longline gear Incidental Take summary for quarter 4, 2006 (Revised).

The Miami Laboratory Pelagic Observer Program (POP) is providing you with a summary report of the incidental take of marine mammals, turtles, and birds that have been recorded by observers aboard longline vessels for October 1 to December 31, 2006. The POP completed an overall coverage rate of 10.4% of the selected pelagic longline fleet for this quarter (Table 1). During the quarter, observers recorded ten (10) marine mammals (6-pilot whales-alive; 1 Pilot whale-dead; 1-marine mammal-dead; 1-dolphin-alive; 1-dolphin-condition unknown) and three (3) seabirds (1-shearwater-alive; 2-greater shearwater-dead), in addition to twenty-four (24) sea turtles (13-leatherbacks-alive; 1-leatherback-dead; 10-loggerheads-alive).

Attached for you are the original Incidental Take (IT) forms submitted by observers during the regular longline coverage, along with copies of the associated haul logs. The POP will maintain copies of the IT forms in our files until you have completed your data review or entry. I recommend that the original IT forms be returned (with any changes in red and initialed) to the POP staff or the file cabinets in Rm 324 when the reviews have been completed.

In closing, in addition to the POP reporting of Protected Resource (PR) species recorded during observed longline fishing, observers have been requested to inspect the turtle handling and dehooking gear available aboard the vessels as a requirement of the 2004 Biological Opinion (BO). Since you are the point-of-contact (POC) person overseeing the Miami BO tasking, I am providing you with copies of the Miami PR Turtle Gear check list forms filled out by the observer from Quarter 4. A PDF file will be created and will be posted on the SEFSC-POP secured website. Although it is not clear how this information will be processed, the originals will remain on file in the observer office, room 314. Analyses associated with Turtle Take Estimates (TTE) or the Net Mortality Ratio (NMR) mentioned in the 2004 BO are not provided as the POP staffing does not have the expertise to provide these results. Finally, the POP observers recorded no sawfish catches during the quarter; this species is not likely to occur in the pelagic environment.
